

Abrasives In Action

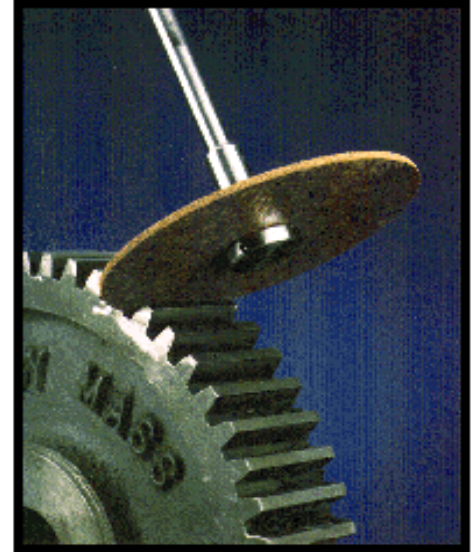

From The Abrasive Solutions Company

Garryson MX

Cotton Fibre Reinforced Abrasive Wheels

Garryson MX cotton fibre reinforced abrasive TYPE 1 WHEEL for deburring and finishing of gears in one operation.

Application

Garryson MX type 1 wheels will grind burrs without changing the geometry of the gear profile. Unlike conventional bonded wheels, MX cotton fibre abrasive wheels run smoothly without chatter, making them easy to control on intricate work, and leave a smooth surface finish.

Select grit size depending on size of burr to be removed. Select wheel thickness based on distance between gear teeth.

Tip

Use MTX bond type for softer materials such as aluminium or brass; the GFX bond type for harder materials such as stainless steel.
