As you can see we are about to introduce some new labels for our ever popular range of flap discs.

It should make life easier all round.

Everyone knows flap discs beat depressed centre discs hands down. They grind and finish in one, create less vibration and noise and have multiple uses for all kinds of materials.

Now we've made sure that identifying the right disc for the job is less of a grind.

Our new labels are packed full of all the information your customer needs and colour coded (Orange for general, Purple for industrial and Green for premium) so they can pick out the right one at a glance.

And of course they've got the Garryson® name and logo so everyone knows they're getting the best.

It's the same great product, just a different face.

We'll be introducing the new labels in the next couple of months, and in the short term you may get a mix of new and old.

If you want any more information about flap discs or any Garryson® product, just give Customer Services a call on +44(0)1530 261145.
